Revision History

Date	Version	Description	Author(s)
Sep 1, 2022	1.22	Updated the degree plans and the prerequisite charts after introducing ENGL 214 as a prerequisite to CGS392.	Wasfi Al-Khatib
Oct 25, 2021	1.21	Fixed typo "ICS 398: Internship" instead of "ICS 398: Summer Training" on Page 7	Wasfi Al-Khatib
Sep 22, 2021	1.2	Updated the NCAAA classification of student outcomes. Added missing course descriptions ICS 398, ICS 399, ICS 411, ICS 439, ICS 445 and ICS 487. Updated the list of ICS Electives. Updated the prerequisites of ICS 471. Updated the course description and prerequisites for ICS 474. Updated the titles in both plans of study of the courses: IAS 111, IAS 212, IAS XXX, GS XXX, ISE 291, COE 292, CHEM 101 and PE 101.	Wasfi Al-Khatib
Feb 20, 2021	1.1	Added concentration details.	Wasfi Al-Khatib
August 27, 2020	1.0	Prepared student guide based on the new program.	Wasfi Al-Khatib

1. Introduction

The Information and Computer Science (ICS) department offers a BS degree in Computer Science, either with summer training or with internship. The current program was revised and approved in 2020. The program has been developed taking into consideration the IEEE/ACM Computing Curricula guidelines and in compliance with the Computing Accreditation Criteria (CAC) of ABET for Computer Science programs.

1.1 ICS Department Vision

The vision of the ICS department is to be a regional leader that is recognized worldwide in education, research and professional development in the areas of Computer Science and Software Engineering.

1.2 ICS Department Mission

The mission of the ICS department is to:

- a. provide high quality undergraduate and graduate educational programs in Computer Science and Software Engineering,
- b. contribute significantly to the research and the discovery of new knowledge and methods in computing,
- c. offer expertise, resources, and services to the community, and
- d. keep its faculty members current by providing opportunities for professional development.

1.3 Computer Science Program Mission

The mission of the computer science program is to provide high quality education in computer science that prepares students for professional careers and postgraduate education, with emphasis on data science and information security.

1.4 Computer Science Program Education Objectives

Computer science graduates will:

1. Have a successful career or pursue an advanced degree in a computing-related area.
2. Work as individuals with minimum guidance and as leaders or members in teams.
3. Follow appropriate professional practices and maintain currency through self-learning or other professional development.

1.5 Computer Science Student Learning Outcomes

By the time of graduation, it is expected that graduates of the program will have an ability to:

Knowledge and Understanding

1. Analyze a complex computing problem and to apply principles of computing and other relevant disciplines to identify solutions.

Skills

2. Design, implement and evaluate a computing-based solution to meet a given set of computing requirements in the context of the program's discipline.
3. Communicate effectively in a variety of professional contexts.

Values

4. Recognize professional responsibilities and make informed judgments in computing practice based on legal and ethical principles.
5. Function effectively as a member or leader of a team engaged in activities appropriate to the program's discipline.

Skills

6. Apply computer science theory and software development fundamentals to produce computing-based solutions.

2 Degree Plans

The ICS department is offering the BS in Computer Science with two options:

Option I: Summer Training.

Option II: Internship.

Degree Requirements of Option I: B. S. in Computer Science (Summer Training)

(a) General Education Requirements (49 credit hours)		Credit Hours
Natural Sciences	PHYS 101, 102, CHEM 101	12
Mathematics and Statistics	MATH 101, 102, 201, 208, STAT 319	17
Business and Entrepreneurship	BUS 200	3
English	ENGL 101, 102, 214	9
Physical Education	PE 101	1
Global and Social Studies	CGS 392	1
Islamic and Arabic Studies	IAS 111, 121, 212	6
		49
(b) Core Requirements (59 credit hours)		Credit Hours
Programming in Python and C	ICS 104	3
Object-oriented Programming	ICS 108	4
Data Structures and Algorithms	ICS 202	4
Discrete Structures	ICS 253	3
Data Science and Database Systems	ISE 291, ICS 321	6
Computer Networks	ICS 343	4
Information Security	ICS 344	3
Design and Analysis of Algorithms	ICS 353	3
Artificial Intelligence	COE 292, ICS 381	6
Programming Languages	ICS 410	3
Senior Project	ICS 411	3
Operating Systems	ICS 433	3
Digital Logic and Digital Logic Laboratory	COE 202, COE 203	4
Computer Organization	COE 301	4
Software Engineering	SWE 206	3
Web Engineering and Development	SWE 363	3
		59
(c) Electives (20 credit hours)		Credit Hours
Computer Science Electives	Four ICS/SWE xxx Courses	12
Global & Social Studies	One GS xxx Course	3
Islamic and Arabic Studies	One IAS xxx Course	2
Technical Elective	XE xxx	3
		20
(d) Summer Training (0 credit hours)		Credit Hours
Summer Training	ICS 399	0
		0

Total number of credit hours required is 128

2.2 Concentration Details

A concentration is comprised of a sequence of four courses in a specific area related to a given program. Concentrations provide students who take them with in-depth knowledge and expertise in that area. The Computer Science program (Summer Training) allows students to take an approved concentration by mapping its courses to the program’s four major elective courses. Currently, there are two concentrations that students following the summer training option can opt for: “**Artificial Intelligence and Machine Learning**” and “**Cybersecurity and Blockchain**”.

a) Artificial Intelligence and Machine Learning

This concentration provides the students with the required knowledge to develop intelligent techniques and systems. The concentration courses are mapped to the four major elective courses as follows:

Concentration Course	Mapped to
ICS 485: Machine learning	ICS XXX: Major Elective I
ICS 471: Artificial Neural Networks and Deep Learning	ICS XXX: Major Elective II
ICS 483: Computer vision	ICS XXX: Major Elective III
ICS 489: Applications of Machine Learning	ICS XXX: Major Elective IV

b) Cybersecurity and Blockchain

This concentration provides the students with the fundamental pillars of computer security and data privacy and how they affect the development of complex engineering systems. The concentration courses are mapped to the four major elective courses as follows:

Concentration Course	Mapped to
COE 426: Data Privacy	ICS XXX: Major Elective I
ICS 440: Cryptography and Blockchain Applications	ICS XXX: Major Elective II
ICS 442: Penetration Testing and Ethical Hacking	ICS XXX: Major Elective III
SWE 445: Secure Software Development	ICS XXX: Major Elective IV

3 Summary of ICS and SWE Courses

3.1 ICS Core Courses

ICS 104	Introduction to Programming in Python and C	2	3	3
ICS 108	Object-oriented Programming	3	3	4
ICS 202	Data Structures and Algorithms	3	3	4
ICS 253	Discrete Structures	3	0	3
ICS 321	Database Systems	3	0	3
ICS 343	Fundamentals of Computer Networks	3	3	4
ICS 344	Information Security	3	0	3
ICS 353	Design and Analysis of Algorithms	3	0	3
ICS 381	Principles of Artificial Intelligence	3	0	3
ICS 398	Internship	0	0	6

ICS 399	Summer Training	0	0	0
ICS 410	Programming Languages	3	0	3
ICS 411	Senior Project	1	6	3
ICS 433	Operating Systems	3	1	3

3.2 SWE Core Courses

SWE 206	Introduction to Software Engineering	2	3	3
SWE 363	Web Engineering and Development	3	0	3

3.3 ICS/SWE Elective Courses

ICS 355	Theory of Computing	3	0	3
ICS 412	Compiler Construction Techniques	3	0	3
ICS 415	Computer Graphics	3	0	3
ICS 424	Advanced Database Systems	3	0	3
ICS 437	Distributed Systems	3	0	3
ICS 439	Cryptography in Quantum Era	3	0	3
ICS 440	Cryptography and Blockchain Applications	3	0	3
ICS 441	Digital Forensics Techniques	3	0	3
ICS 442	Penetration Testing and Ethical Hacking	3	0	3
ICS 443	Network Design & Management	3	0	3
ICS 445	Network Management and Security	3	0	3
ICS 446	Cluster Computing	3	0	3
ICS 447	Computer Network Technologies	3	0	3
ICS 448	Network and Security Administration	2	3	3
ICS 471	Artificial Neural Networks and Deep Learning	3	0	3
ICS 472	Natural Language Processing	3	0	3
ICS 473	Bioinformatics Mining and Algorithms	3	0	3
ICS 474	Big Data Analytics	3	0	3
ICS 483	Computer Vision	3	0	3
ICS 484	Arabic Computing	3	0	3
ICS 485	Machine Learning	3	0	3
ICS 486	Agent-Based Systems and Swarm Intelligence	3	0	3
ICS 487	Intelligent Decision Support Systems	3	0	3

ICS 488	Knowledge-Based Systems and Soft Computing	3	0	3
ICS 489	Applications of Machine Learning	3	0	3
ICS 490	Special Topics I	3	0	3
ICS 491	Special Topics II	3	0	3
ICS 497	Directed Undergraduate Research	3	0	3
SWE 302	Game Programming	3	0	3
SWE 316	Software Design and Construction	3	0	3
SWE 321	Formal Methods and Models in Software Engineering	3	0	3
SWE 326	Software Testing	3	0	3
SWE 387	Software Project Management	3	0	3
SWE 416	Software Architecture	3	0	3
SWE 422	Usability Engineering	3	0	3
SWE 436	Object-Oriented Design Patterns	3	0	3
SWE 439	Software Quality Engineering	3	0	3
SWE 440	Information Security Management	3	0	3
SWE 445	Secure Software Development	3	0	3
SWE 463	Mobile Application Development	3	0	3
SWE 487	Software Processes and Process Improvements	3	0	3
SWE 490	Special Topic I	3	0	3
SWE 491	Special Topic II	3	0	3

3.4 Free Elective Courses

Following is a list of recommended free electives for the CS program. A written approval from the ICS department is needed for courses outside this list.

List of Course Numbers and Titles	List of Course Numbers and Titles
ACCT 201: Principles of Accounting I	COE 488: Data Acquisition Interfacing
ACCT 202: Principles of Accounting II	ECON 101: Principles of Economics I (MICRO)
ACCT 300: Accounting Information Systems	ECON 102: Principles of Economics II (MACRO)
AE 220: Introduction to Aerospace Engineering	ECON 403: Engineering Economics
AE 313: AE Systems and Control	ECON 410: International Economics
AE 325: Gas Dynamics I	EE 200: Digital Logic Circuit Design
AE 333: Aerodynamics I	EE 202: Electric Circuits I
AE 403: Aerospace Materials	EE 204: Fundamentals of Electrical Circuits
AE 410: Astronautics	EE 205: Electric Circuits II
AE 414: Flight and Air Traffic Control	EE 206: Intro. to Electrical Systems and Computations
AE 415: Flight and Aviation Safety	EE 390: Digital Systems Engineering

AE 416: Flight and Aviation Management	GEOL 202: Applied Geosciences for Scientists & Eng.
AE 417: Flight and Aviation Law	GEOL 303: Sustaining the Earth
AE 418: Flight and Aviation Economics	GEOP 202: Introduction to Geophysics
AE 426: Flight Dynamics I	GS 318: World Civilization

MGT 301: Principles of Management	STAT 460: Time Series
MGT 310: Organization Behavior	

4 Catalog Description of ICS and SWE Courses

4.1 CS Courses

ICS 104: Introduction to Programming in Python and C (3-3-3)

Overview of computer hardware and software. Programming in Python with emphasis on basic program constructs: variables, assignments, expressions, decision structures, looping, functions, lists, files, and exceptions; Introduction to objects and classes. Programming in C with emphasis on pointers and functions with output parameters. Simple multidisciplinary problem solving in science, engineering, and business.

Prerequisites: None.

ICS 108: Object-Oriented Programming (3-3-4)

Advanced object-oriented programming; Inheritance; Polymorphism; Abstract classes and interfaces; Generic and collection classes; File input and output; Exception handling; GUI and event-driven programming; Recursion; Searching and sorting.

Prerequisites: ICS 104

ICS 202: Data Structures and Algorithms (3-3-4)

Review of object-oriented concepts; Basic algorithms analysis; Fundamental data structures - implementation strategies for stacks, queues, and linked lists; Recursion; Implementation strategies for tree and graph algorithms; Greedy Algorithms; Hash tables; Applications of data structures (e.g., data compression and string matching).

Prerequisites: ICS 108

ICS 253: Discrete Structures (3-0-3)

Propositional Logic, Propositional Equivalence, Predicates and Quantifiers, Nested Quantifiers, Rules of Inference, Introduction to Proofs; Sets, Set Operations, Functions, Sequences and Summations; Mathematical Induction, Strong Induction, Recursive Definitions and Structural Induction; Basics of Counting, Pigeonhole Principle, Permutations and Combinations, Binomial Coefficients, Discrete Probability, Probability Theory; Recurrence Relations, Solving Linear Recurrence Relations, Generating Functions, Inclusion-Exclusion.

Prerequisites: ICS 104

ICS 321: Database Systems (3-0-3)

Basic database concepts; Conceptual data modeling; Relational data model; Relational theory and languages; Database design; SQL; Introduction to query processing and optimization; Introduction to concurrency and recovery.

Prerequisites: ICS 202

ICS 343: Fundamentals of Computer Networks (3-3-4)

Introduction to computer networks and layered architectures: Connectivity, topology, circuit and packet switching, TCP/IP and ISO models; Application layer: C/S model, DNS, SMTP, FTP, WWW; Transport layer: TCP and UDP, ARQ, congestion and flow control; Network layer: Internetworking, addressing and routing algorithms and protocols; Data link layer: Framing, error detection and correction, medium access control and LANs; Physical layer: Principles of data communications, circuit switching, encoding, multiplexing and transmission media; Introduction to network security.

Note: This course cannot be taken for credit with COE 344.

Prerequisites: ICS 108

ICS 344: Information Security**(3-0-3)**

Security properties; Confidentiality, integrity, authentication, non-repudiation; Attack vectors, malicious software and countermeasures; Risk management and analysis; Security mechanisms; Secure software development; Defensive programming; Input sanitization; Symmetric and public-key cryptography; User authentication and access control; Internet security: Email and web security, network security protocols and standards such as IPsec and SSL/TLS; Security technologies and systems: Firewalls, VPNs and IDSs/IPs; Information security process, ethical and legal issues.

Prerequisites: ICS 343 or COE 344**ICS 353: Design and Analysis of Algorithms****(3-0-3)**

Basic algorithmic analysis; Analysis of iterative and recursive algorithms; Advanced algorithmic design techniques (induction, divide and conquer, dynamic programming, backtracking); The complexity classes P and NP; Basic computability; Parallel algorithms.

Prerequisites: ICS 202, ICS 253**ICS 355: Theory of Computing****(3-0-3)**

Regular grammars: Equivalence of DFA, NFA and regular expressions, pumping lemma, emptiness, and membership; Context-Free Grammars: parsing and ambiguity, normal forms, applications, equivalence of PDA's and CFG's, pumping lemma, emptiness and membership; Turing machines: Programming techniques for Turing machines, universal Turing-machine; Undecidability: Recursively enumerable and recursive languages, undecidability, problem reduction, undecidable problems of CFG's, RE's and TM's.

Prerequisites: ICS 253**ICS 355: Theory of Computing****(3-0-3)**

Regular grammars: Equivalence of DFA, NFA and regular expressions, pumping lemma, emptiness, and membership; Context-Free Grammars: parsing and ambiguity, normal forms, applications, equivalence of PDA's and CFG's, pumping lemma, emptiness and membership; Turing machines: Programming techniques for Turing machines, universal Turing-machine; Undecidability: Recursively enumerable and recursive languages, undecidability, problem reduction, undecidable problems of CFG's, RE's and TM's.

Prerequisites: ICS 253**ICS 381: Principles of Artificial Intelligence****(3-0-3)**

AI history and applications; Intelligent agents and expert systems; Introduction to AI programming; Problem solving agents by uninformed, heuristic and local search; Constraint satisfaction and programming, games and adversarial search; Knowledge-based agents: Propositional and first-order logic, Forward and backward chaining and inference; Planning and reasoning in uncertain situations; Basics of machine learning; Natural language processing; Exposure to other applications of AI (e.g. Vision and Robotics)

Prerequisites: ICS 253**Co-requisites: STAT 319**

ICS 398: Internship**(0-0-6)**

A continuous period of 16 weeks spent as a normal “new” employee in industry, business, or government agencies with the purpose of familiarizing students with the real world of work and enabling them to integrate their learning to a real work environment. During this period, a student is exposed to a real-life work in the field and work as a normal employee. Each student is required to participate with at least one project. Students are required to submit progress reports during the work period. Students are also required to give a presentation and submit a final report on their experience and the knowledge they gained during their work.

Prerequisites: ENGL 214, ICS 321, SWE 206, SWE 363, Completion of at least 85 hours, Major and Cumulative GPA of at least 2.0.

ICS 399: Summer Training**(0-0-0)**

A continuous period of 8 weeks spent as a normal employee in industry, business, or government agencies with the purpose of familiarizing students with the real world of work and enabling them to integrate their classroom learning to a real work environment. During this period, a student is exposed to a real-life work in the field. Students are required to submit progress reports during the work period. Students are also required to give a presentation and submit a final report on their experience and the knowledge they gained during their Training.

Prerequisites: ENGL 214, ICS 321, SWE 206, SWE 363, Completion of at least 85 hours, Major and Cumulative GPA of at least 2.0.

ICS 410: Programming Languages**(3-0-3)**

Programming paradigms: Object-oriented, imperative, functional, and logic; Application development in these paradigms; Fundamentals of Language Design: Syntax and semantics; Language implementation: virtual machines; Compilation, interpretation, and hybrid.

Prerequisites: ICS 202

ICS 411: Senior Project**(1-6-3)**

Project-oriented course in which students work in teams on an applied real-world problem of their interest, go through its software development lifecycle in order to develop a prototype software solution for the problem at hand. The senior project offers the opportunity to integrate the knowledge acquired in preceding courses, as well as promote and instill communication skills, writing skills, and lifelong self-learning.

Prerequisites: ICS 398 or ICS 399

ICS 412: Compiler Construction Techniques**(3-0-3)**

Compiler techniques and methodology; Organization of compilers; Lexical and syntax analysis; Parsing techniques; Object code generation and optimization, detection, and recovery from errors; Contrast between compilers and interpreters.

Prerequisites: ICS 202, ICS 253

ICS 415: Computer Graphics**(3-0-3)**

Applications of computer graphics; Graphics systems and devices; Output primitives and their attributes; Geometric transformations; Window to viewport mapping and clipping; Curves and surfaces; Three-dimensional viewing; Hidden surface removal; illumination and color models; Animation.

Prerequisites: ICS 202

ICS 424: Advanced Database Systems**(3-0-3)**

Data preprocessing, data warehousing and OLAP; Security, transaction processing, concurrency control techniques, and backup and recovery of relational databases; Introduction to non-relational database systems such as NoSQL and NewSQL databases.

Prerequisites: ICS 321

ICS 433: Operating Systems**(3-1-3)**

History and evolution of operating systems; Types of operating systems; Operating system structures; Process management: processes, threads, CPU scheduling, process synchronization; Memory management and virtual memory; File systems; I/O systems; Security and protection; Distributed systems; Case studies.

Prerequisites: COE 233 or COE 301

ICS 437: Distributed Systems**(3-0-3)**

Introduction to distributed systems; Distributed systems architecture; Computer networks for distributed systems; Distributed objects and remote invocation; Distributed naming; Distributed file systems; Security and synchronization in distributed systems; Distributed coordination and agreement; Distributed transactions; Distributed replication; Distributed multimedia systems, distributed shared memory; Case studies.

Note: It cannot be taken for credit with COE 423.

Prerequisites: ICS 343 or COE 344

ICS 439: Cryptography in Quantum Era**(3-0-3)**

The difference between quantum cryptography and existing conventional cryptography, Integer Algorithms, Modular Arithmetic, Symmetric-key Cryptography, Perfect Secrecy, Stream and Block cipher, Group Theory, Public Key Cryptography, Quantum cryptography and cryptanalysis, Key distribution protocols, Quantum money, quantum one-time pad.

Note: Not to be taken for credits with COE 440

Prerequisites: COE 466

ICS 440: Cryptography and Blockchain Applications**(3-0-3)**

Secret key encryption; Block and stream ciphers, Encryption standards; Number theory: Divisibility, Modular arithmetic, Group theory and Finite fields; Public key encryption: RSA, ElGamal and Rabin cryptosystems; Diffie-Hellman key exchange; Cryptographically secure hashing; Authentication and digital signatures; Digital signature standard (DSS), Randomized encryption; Cryptocurrency, Blockchain models and applications. Security issues and their solutions in Blockchain models and applications. Blockchain payment networks.

Prerequisites: MATH 208 and STAT 319

ICS 441 Digital Forensics Techniques**(3-0-3)**

Major phases of digital investigation; Data acquisition of physical storage devices; Study of file systems with a main focus on Microsoft Windows and Linux systems; File system analysis and file recovery; File carving and document analysis; Information hiding and steganography; Time, registry, and password recovery; Email and database forensics; Memory acquisition.

Prerequisites: ICS 253 or Consent of Instructor

ICS 442: Penetration Testing and Ethical Hacking**(3-0-3)**

Introduction to penetration testing and ethical hacking, requirements and legal issues, setting up virtual lab; Exploring Kali Linux and Metasploit framework, hacking and penetration testing phases; Information gathering through passive and active reconnaissance, footprinting, social engineering, port scanning; Advanced fuzzing techniques; Exploitation, password attacks and gaining access to remote services; Web penetration testing and web-based exploitation; Maintaining access with backdoors and rootkits; Bypassing defense applications; Wireless and mobile device hacking techniques; Writing penetration testing report; Tools and programming available for penetration testers in both Windows and Linux platforms such as Kali Linux, OpenVAS, Burp, NMAP, Netcat, Python, etc.

Prerequisites: ICS 343 or COE 344 or COE 353

ICS 443: Network Design & Management (3-0-3)

Overview of network design and management; Design methodologies; Network management strategies; Network configuration management; Network management protocols: SNMP, and RMON; Network management tools and systems; Network management applications; Desktop and web-based network management; Network troubleshooting.

Note: This course cannot be taken for credit with COE 444.

Prerequisites: ICS 343 or COE 344

ICS 445: Network Management and Security (3-0-3)

Network Management Standards, Models, and protocols. Network Management Applications, Tools, and Systems. Remote Monitoring and Management (RMM). Large scale network management techniques and systems. Security of LANs, wireless LANs, and cellular networks. Authentication, authorization, accountability, and access controls of computer networks. Network protection tools: Firewalls, Intrusion Detection and Prevention Systems, Sandboxing, proxies. Study of diverse attack types: DDoS, spoofing, flooding, hijacking, poisoning, DNS, replay attacks and their countermeasures. Hands-on experiences in network security using Kali Linux. Hands-on experiences in implementing secure, manageable networks.

Note: Cross-listed with COE 555

Prerequisites: ICS 343 or COE 344 or EE 400

ICS 446: Cluster Computing (3-0-3)

Introduction to high performance computing: Types of parallel computers, system architectures and performance measures; Message passing programming; Complexity analysis of parallel algorithms; Embarrassingly parallel computations; Partitioning and divide-and-conquer strategies; Pipelined computations; Synchronous computations; Load balancing and termination detection; Programming with shared memory; Parallel sorting algorithms; Numerical algorithms; Parallel image processing; Searching and optimization.

Note: It cannot be taken for credit with COE 420.

Prerequisites: ICS 202 and Junior Standing

ICS 447: Computer Network Technologies (3-0-3)

Performance measures and evaluation techniques; Advanced network architectures and differentiated services in IP networks; Switched, fast and gigabit Ethernet; VLANs; Wireless LANs; ISDN and ATM; Frame relay; Mobile computing and mobile IP; VPN and enterprise networks; Emerging network trends and technologies.

Note: It cannot be taken for credit with COE 446.

Prerequisites: ICS 343 or COE 344

ICS 448: Network and Security Administration (2-3-3)

Installing, configuring, securing, and administering network services. Assessing tools for improving data/service protection; Securing remote and local network infrastructures; DNS servers, web servers, network file sharing, and other common network communication components; Practical experience through hands-on lab exercises.

Prerequisites: ICS 344 or Consent of Instructor

ICS 471: Artificial Neural Networks and Deep Learning (3-0-3)

The course will review linear models and stochastic optimization. It will develop an in-depth understanding of Feedforward networks, Loss functions, Back-propagation training, Regularization, Convolutional neural networks, Recurrent and recursive networks, vanishing gradient problem, Long-short term memory (LSTM) model, Gated recurrent units (GRUs), Processing sequences, images, and hierarchical structures, Auto-encoders, Transfer learning, and Generative adversarial networks. The course will develop models for several domain problems such as automatic speech recognition, image recognition, drug discovery, and recommendation systems, etc..

Prerequisites: (COE 292 or ICS 381) and (MATH 208 or MATH 260 or ICS 254) and STAT 319

ICS 472: Natural Language Processing (3-0-3)

Foundations of natural language processing (NLP); Different algorithms and techniques for NLP: Word-level, syntactic, and semantic; Quantitative NLP using large corpora, statistical models for acquisition, disambiguation, parsing and the construction of representative systems.

Prerequisites: ICS 381 or Consent of Instructor.

ICS 473: Bioinformatics Mining and Algorithms (3-0-3)

Foundations of bioinformatics; Sequence alignment; Sequence motifs/patterns; Protein structures prediction; Microarray data analysis; Biological networks modeling and mining.

Prerequisites: [ICS 202 and ICS 381] or Consent of Instructor

ICS 474: Big Data Analytics (3-0-3)

Introduction and foundation of big data and big-data analytics. Sources of big data. Smart clouds. Hadoop file system and Apache Spark. Storage management for big data. Machine learning and visualization with big data. Applications of big data. Big data security, privacy, and its societal impacts.

Prerequisites: (MATH 101 or MATH 106), (ISE 205 or STAT 201 or STAT 211 or STAT 212 or STAT 319 or EE 315)

ICS 483: Computer Vision (3-0-3)

Image acquisition, Digital image and its properties, Image preprocessing, Segmentation (Thresholding, edge- and region-based segmentation), Morphological image processing. Image feature extraction. Bag of words. Image segmentation. Object detection and classification. Shape analysis. Feature tracking. Motion analysis. Case studies (object recognition / object tracking).

Note: It cannot be taken for credit with COE 487 or EE 410.

Prerequisites: Senior Standing

ICS 484: Arabic Computing (3-0-3)

Arabic language characteristics; Arabic character sets; Standardization; Unicode; Arabization systems; Arabic software tools; Arabic programming languages and introduction to Arabic computations.

Prerequisites: ICS 108 or Consent of Instructor

ICS 485: Machine Learning (3-0-3)

This course provides a thorough grounding in a wide range of machine learning methods, for classification, regression, conditional probability estimation, clustering, and dimensionality reduction. It provides the students with the essential foundations of machine learning and their applications to real world problems.

Prerequisites: COE 292 and MATH 208 and STAT 319

ICS 486: Agent-Based Systems and Swarm Intelligence (3-0-3)

Fundamental concepts and models of multi-agent systems (MAS) and their characteristics; Models of agency; Architectures and languages; Logics for MAS; Deductive and practical reasoning agents; Reactive and hybrid agents; Coordination, negotiation and coalition mechanisms; Learning in MAS; Agent and swarm-based models to solve an optimization problem using PSO, Ants, and GA; Implementing agent and swarm-based applications (e.g. in electronic commerce, semantic Web agents, and information retrieval).

Prerequisites: ICS 381

ICS 487: Intelligent Decision Support Systems (3-0-3)

Introduction and need for Decision Support Systems (DSS). Nature of Decision problems and the elements of the decision process with examples. Essential elements of decision-making. Evolution of DSS: management information systems, decision support systems (DSS), intelligent decision support systems (IDSS). IDSS architecture, data collection, data analysis & exploration, design and implementation. IDSS techniques: case-based reasoning, decision trees, knowledge representation. Case studies and projects: e-commerce, knowledge management, recommender systems and actions.

Prerequisites: ISE 205 or STAT 319 or EE 315

ICS 488: Knowledge Based System and Soft Computing (3-0-3)

Introduction to knowledge and soft computing based systems; Handling imprecision and uncertainty; Probabilistic reasoning and rough sets; Structured approach to fuzzy reasoning; Machine learning and neuro computing; Evolutionary computation and genetic algorithms; Immunological computing; Hybrid computational intelligence methods; Neuro-fuzzy inference systems; Combination of genetic algorithms with neural networks; Combination of genetic algorithms with fuzzy based systems; Applications to real life applications for building expert systems and pattern recognition.

Prerequisites: ICS 381

ICS 489: Applications of Machine Learning (3-0-3)

This is a multidisciplinary course that covers applications of artificial intelligence (AI) and machine learning (ML) in different domains. Students will use the knowledge earned from AI & ML concentration courses to develop industry-relevant solutions on electrical engineering, computer linguistics, embedded systems, and health domains. Students will work on several programming assignments and mini projects in signal processing, natural language processing and medical imaging. In addition, students will learn how to implement energy-efficient, real-time ML-based solutions.

Prerequisites: ICS 485

ICS 490: Special Topics I (3-0-3)

State-of-the-art topics in Computer Science and Information Systems.

Prerequisites: Senior Standing

ICS 491: Special Topics II (3-0-3)

State-of-the-art topics in Computer Science and Information Systems.

Prerequisites: Senior Standing

ICS 497: Directed Undergraduate Research (3-0-3)

The course introduces students to research. Explains the differences between different publications channels like conferences, journals, books, and book chapters. Introduces students to metrics like impact factor and H-index. Teaches how to search and locate relevant literature on a given research topic. Introduces students to research methodology, experimentation design, and ways to conduct experiments and report the results. It also teaches students on how to prepare a research article.

Prerequisites: Consent of Instructor

4.2 SWE Courses

SWE 206 Introduction to Software Engineering (2-3-3)

Introduction to software engineering discipline, software process, requirements analysis and design models. Understanding of ethical and professional issues of software engineering discipline

Prerequisites: ICS 108

SWE 216 Requirements Engineering (3-0-3)

Requirements engineering process. Methods, tools, and techniques for eliciting, organizing, and documenting software requirements. Analysis and validation techniques, including need, goal, and use case analysis. Requirements documentation standards. Traceability. Requirements management. Handling requirements changes. Capturing usability requirements and developing UI prototypes based on requirements. Students participate in a group project on software requirements.

Prerequisites: SWE 206

SWE 302 Game Programming (3-0-3)

Introduction to games; Game programming principles; Game development engines: PyGame and Unity3D; Game data structures; Game intelligence; Simulation; Graphics and animation; Collision detection; Strategy games; Action games; Games research; Application of games to other domains.

Prerequisites: SWE 206

SWE 316 Software Design and Construction (3-0-3)

Study of design concepts and notations. Architecture, construction, and design patterns. Designing for different qualities criteria. Design evolution processes and activities.

Prerequisites: SWE 206

SWE 321 Formal Methods and Models in Software Engineering (3-0-3)

Mathematical foundations for formal methods. Formal languages and techniques for specification and design, including specifying syntax using grammars and finite state machines. Analysis and verification of specifications and designs. Use of assertions and proofs. Automated program and design transformation.

Prerequisites: ICS 202 and ICS 253

SWE 326 Software Testing (3-0-3)

Practical ways to design high quality tests during all phases of software development. Test Planning. Test design. Test coverage criteria. Test automation. Concept of static analysis. Reviews. Walkthroughs. Inspections. Students participate in a group project on software.

Prerequisites: SWE 216

SWE 363 Web Engineering and Development (3-0-3)

Fundamentals of web and mobile applications and how they impact people's lives; Building responsive front-end web and mobile apps; Back-end programming of dynamic and data-driven websites; Development frameworks for web and mobile apps; Security issues of web applications; Practical applications to real-world problems.

Prerequisites: Junior Standing

SWE 387 Software Project Management (3-0-3)

Introduction to project management concepts, managing time, cost, change, risk, quality, communication, and people; development and management standards and managing software development projects.

Prerequisites: Junior Standing

SWE 399 Summer Training (0-0-0)

A summer period of 8 weeks spent as a trainee in industry, business, or government agencies for the purpose of familiarizing the student with the real job world and enabling him to apply and relate his academic knowledge to a real work environment. The student is required to participate in software engineering related activities and use his time to get acquainted with the software engineering related functions and resources used by his employing organization. Besides progress reports, the student is required to submit a final report and do a presentation on his experience and the knowledge he gained during his summer training program.

Prerequisites: SWE 363, ENGL 214 and Department Approval

SWE 411 Software Engineering Project I (1-6-3)

This is the first part of a two-semester senior-year capstone project. Student teams employ knowledge gained from courses throughout the program such as development of requirements, design, implementation, and quality assurance to develop a software solution to a real-world problem from conception to completion. In this part, students develop project plan and software requirements specification. Next, students' teams can either develop complete design document or follow agile like methodology to develop design document and implementation for 30% of system features.

Prerequisites: SWE 316 and SWE 387

SWE 412 Software Engineering Project II (0-6-2)

This is the second part of a two-semester senior-year capstone project. Student teams employ knowledge gained from courses throughout the program to develop a software solution to a real-world problem from conception to completion. In this part, students review and refine documents prepared in SWE 411; finalize design, complete implementation of the application, test their code, and evaluate their final product.

Prerequisites: SWE 326 and SWE 411

SWE 416 Software Architecture (3-0-3)

Study the concepts, principles, methods, and best practices in software architecture. Different architectural styles, patterns and product lines are presented and compared. Methods to analyze, evaluate and document software architectures are also discussed. Students participate in a group project on software architecture design.

Prerequisites: SWE 316

SWE 422 Usability Engineering (3-0-3)

Design, implement and evaluate software system interfaces with focus on usability, interaction paradigms and human computer activities. The lifecycle of an interactive human computer interface is studied from both engineering and end-user perspectives.

Prerequisites: SWE 206

SWE 436 Object-Oriented Design Patterns (3-0-3)

A depth study of object-oriented design patterns. How design patterns solve design problems? How to select a design pattern? How to use a design pattern? Detailed study of creational patterns, structural patterns, and behavioral patterns. Case studies.

Prerequisites: SWE 316

SWE 439 Software Quality Engineering (3-0-3)

Overview of engineering foundations of software, basics of measurement theory, empirical experimentation in software engineering, software metrics and measuring software quality.

Prerequisite: SWE 316 and STAT 319

SWE 440 Information Security Management (3-0-3)

Introduction to information security management principles, management of threats to and vulnerabilities of information security, risk management, and to apply the knowledge of people and technical security controls.

Prerequisite: Senior Standing

SWE 445 Secure Software Development (3-0-3)

Security in requirements engineering; Secure designs; Risk analysis; The SQUARE Process Model; Threat modeling; Defensive coding; Software protection; Fuzzing; Static analysis and security assessment; Memory leaks, buffer and heap overflow attacks, injection attacks.

Prerequisite: Senior Standing

SWE 463 Mobile Application Development (3-0-3)

Comprehensive introduction to building mobile applications for devices based on Android and iOS operating systems, including use of standard integrated development environment: Android Studio and Xcode, as well as testing and debugging on devices and emulators/simulators. Topics cover programming language for iOS programming, and mobile platform APIs for user interface, graphics, networking, data, and web services

Prerequisite: ICS 108

SWE 487 Software Processes and Process Improvements. (3-0-3)

Software process models. Software process analysis. Life cycle process models and standards. Process implementation at various levels like organization, project, team, or individual. Measurement and analysis of software process. Process improvements.

Prerequisite: SWE 387

SWE 490 Special Topics I (3-0-3)

In-depth study of a selected special topic relevant to software engineering

Prerequisites: Consent of the Instructor

SWE 491 Special Topics II (3-0-3)

In-depth study of a selected special topic relevant to software engineering

Prerequisites: Consent of the Instructor

SWE 497 Undergraduate Research (3-0-3)

The course introduces students to research. Explains the differences between different publications channels like conferences, journals, books, and book chapters. Introduces students to metrics like impact factor and H-index. Teaches how to search and locate relevant literature on a given research topic. Introduces students to research methodology, experimentation design, and ways to conduct experiments and report the results. It also teaches students on how to prepare a research article.

Prerequisites: Consent of the Instructor
